

I respectfully urge the FCC to reject NAB's petition 04-160. I feel satellite radio provides a valuable and unique service, especially in many rural areas. There are several areas within the state of Utah that I travel through where there is a very limited availability of FM and AM radio stations. The fact that satellite radio can be received virtually anywhere was one of the main reasons I chose to subscribe, and I do not feel XM's content should be limited by local stations. Thank you.
